Claim Objections

1. Claims 26 and 32 are objected to because of the following informalities: In line 2 "displaying an image on an object", is the on supposed to be an of like in claim 29. Appropriate correction is required.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 26-34 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,091,377. Although the conflicting claims are not identical, they are not patentably distinct from each other because the application discloses an image of an object picked up by a camera and stored together with direction information of the camera. Patent 6,091,377 discloses an image of an object picked up by an image pickup unit and stored together with detection results of said detecting means. The application says camera whereas the patent has image pickup unit. This is not a patentably distinct difference because a camera is a type of image pickup unit. The application also discloses a reproducing device to reproduce the images. The patent discloses a display device to display the images picked up. Displaying the images is not patentably distinct from reproducing them.
4. As per claims 27, 30 and 33, the application discloses a detecting device to detect a direction of the camera and generate the direction information of the camera. The patent discloses a detecting means

for detecting a direction of the image pickup unit and storing the detection results. The detection results are not patentably distinct from the direction information.

5. As per claims 28, 31 and 34, the application discloses storing the direction information of the camera with the plurality of images where the direction information is information as to a direction where the camera is directed. The patent discloses storing the plurality of images with the detection results (direction information) where the results is the information as to a direction where the image pickup unit is directed.
